

Development of novel point of care methods for allergen and mold detection

Karen C. Dannemiller, PhD

Associate Professor

 @KarenCDannemiller

OHHN

May 1, 2026

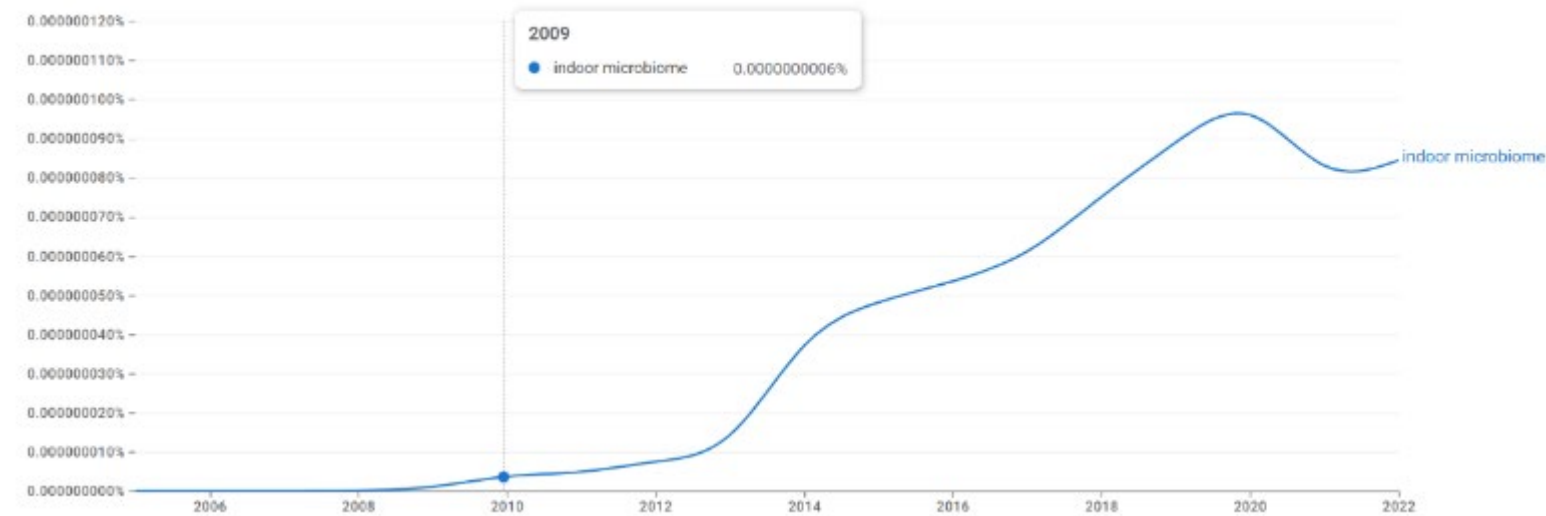

THE OHIO STATE UNIVERSITY

Our homes contain a complex indoor microbiome

The Indoor Microbiome is a nascent field

“Indoor Microbiome” mentions on
Google Scholar

Web of Science

Born out of a need for Biosecurity

Figure. Cerebrospinal fluid of the first documented anthrax case in 2001.

Large, boxcar-shaped, gram-positive bacilli and polymorphonuclear leukocytes (Gram stain; original magnification, $\times 400$).

Bush et al, 2012. <https://doi.org/10.7326/0003-4819-155-12-201112200-00373>

Born out of a need for Biosecurity

We want to detect a threat, but we don't know what is normal

We have spent a decade on characterization

Haines et al., Building and Environment, 170, 2020, 106589

Now it's time to move to application!

- Viral pathogen surveillance
- Mold
- Asthma prevention
- Biosecurity

- And more!

Talk Outline

Healthy Indoor Microbiome

Part 1: New Mold Indicators

Part 2: Pathogen Surveillance

Part 3: Asthma and Sensors

Part 1: Today, exposure to mold in homes costs \$22.4 billion per year

Artwork by Daniele Del Nero

16% of cost associated with:

- Allergic Rhinitis
- Acute Bronchitis
- Asthma

Mudarri, D., J Environ Public Health. 2016; 2016: 2386596.

About 1 in 6 cases of asthma attributed to damp buildings, but what is the cause?

Mudarri, D., J Environ Public Health. 2016; 2016: 2386596.

Lack of quantitative measurement method is a scientific failing

Association with health outcome

Mendell and Adams, Indoor Air, 2019

Dust is embedded in carpet

10 cm x 10 cm
carpet coupon

Apply dust

Embed dust with modified ASTM
F608-13 method

Dust is embedded

Place carpet coupon in temperature- &
relative humidity-controlled chamber

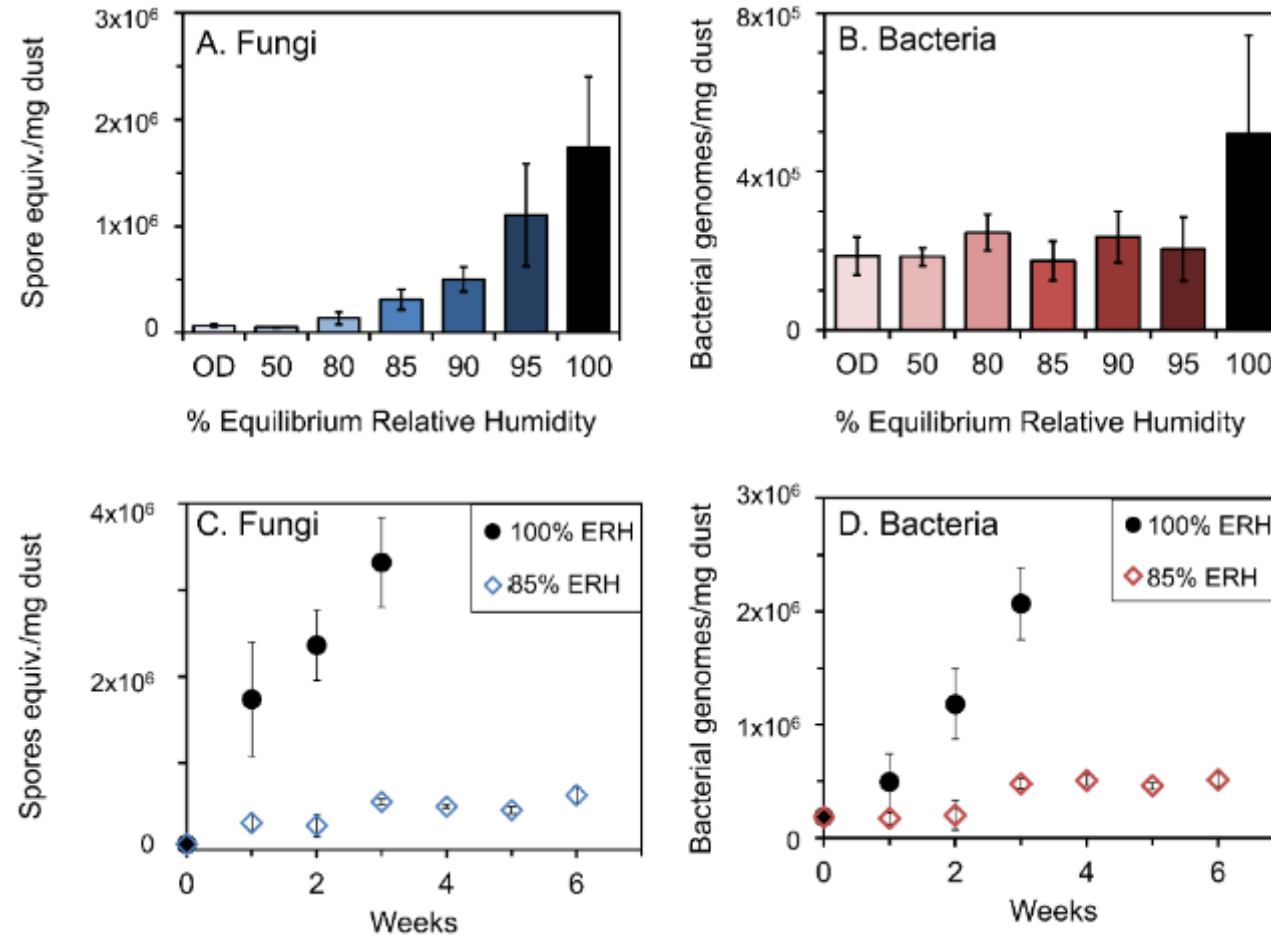

Water activity (a_w) of dust equilibrates quickly with RH

$$a_w = \frac{p_{dust}}{p_{water}}$$

$$\text{Equilibrium RH} = a_w \times 100\%$$

Microbial growth occurs above 80% relative humidity

Dannemiller, Weschler, and Peccia. *Indoor Air*, 2016

Moisture is the limiting factor for growth

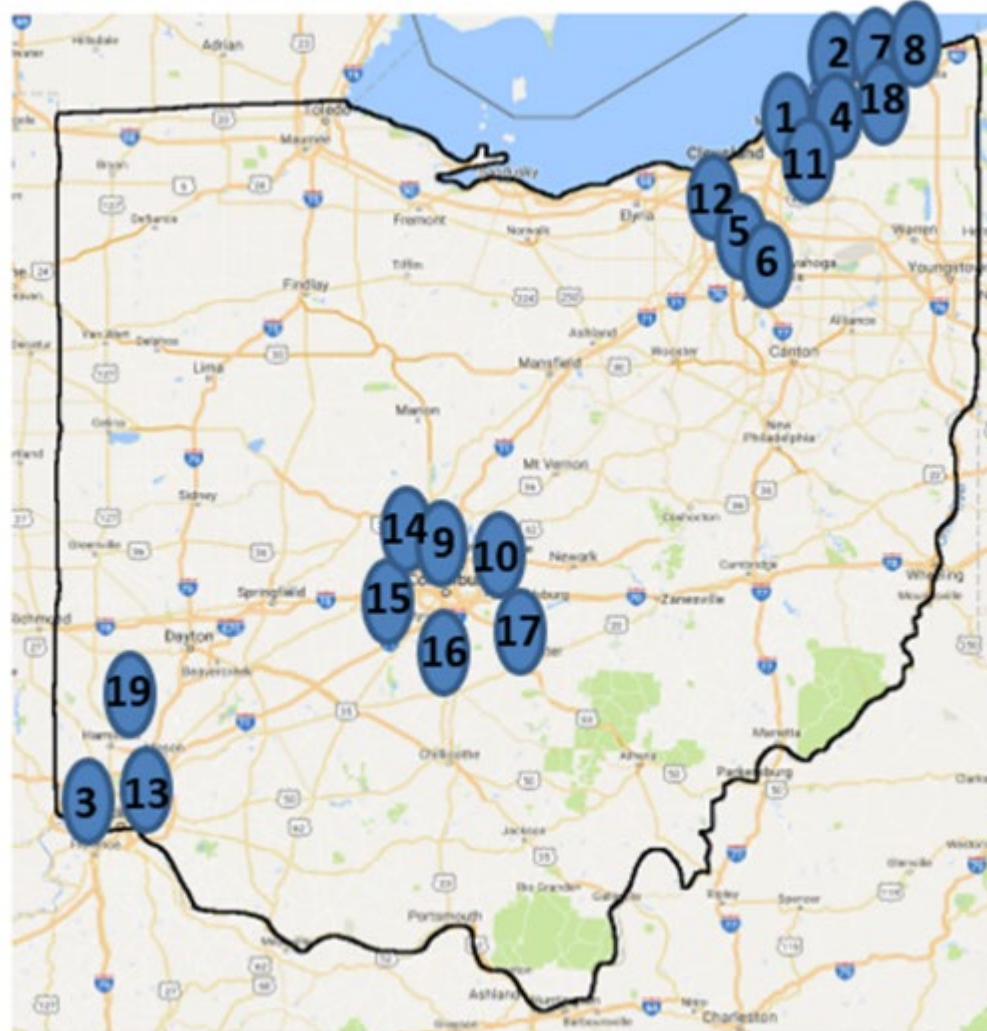

Nutrient/ Salt	Dissolvable amount in dust (mg/kg dust)	Estimated amount needed to support growth (mg/kg dust)
C	35000	7.2
N	5.7	1.3
P	7.9	0.22
S	9.1	0.058
Na	6300	-
K	2100	-
Ca	1600	-
Mg	220	-
NH ₄	160	-
Cl	2400	-

Dannemiller, Weschler, and Peccia. *Indoor Air*, 2016

Next Goal: Determine how variations in RH affect fungal growth in carpet

Sarah Haines

Goal: Determine how variations in RH affect fungal growth in carpet

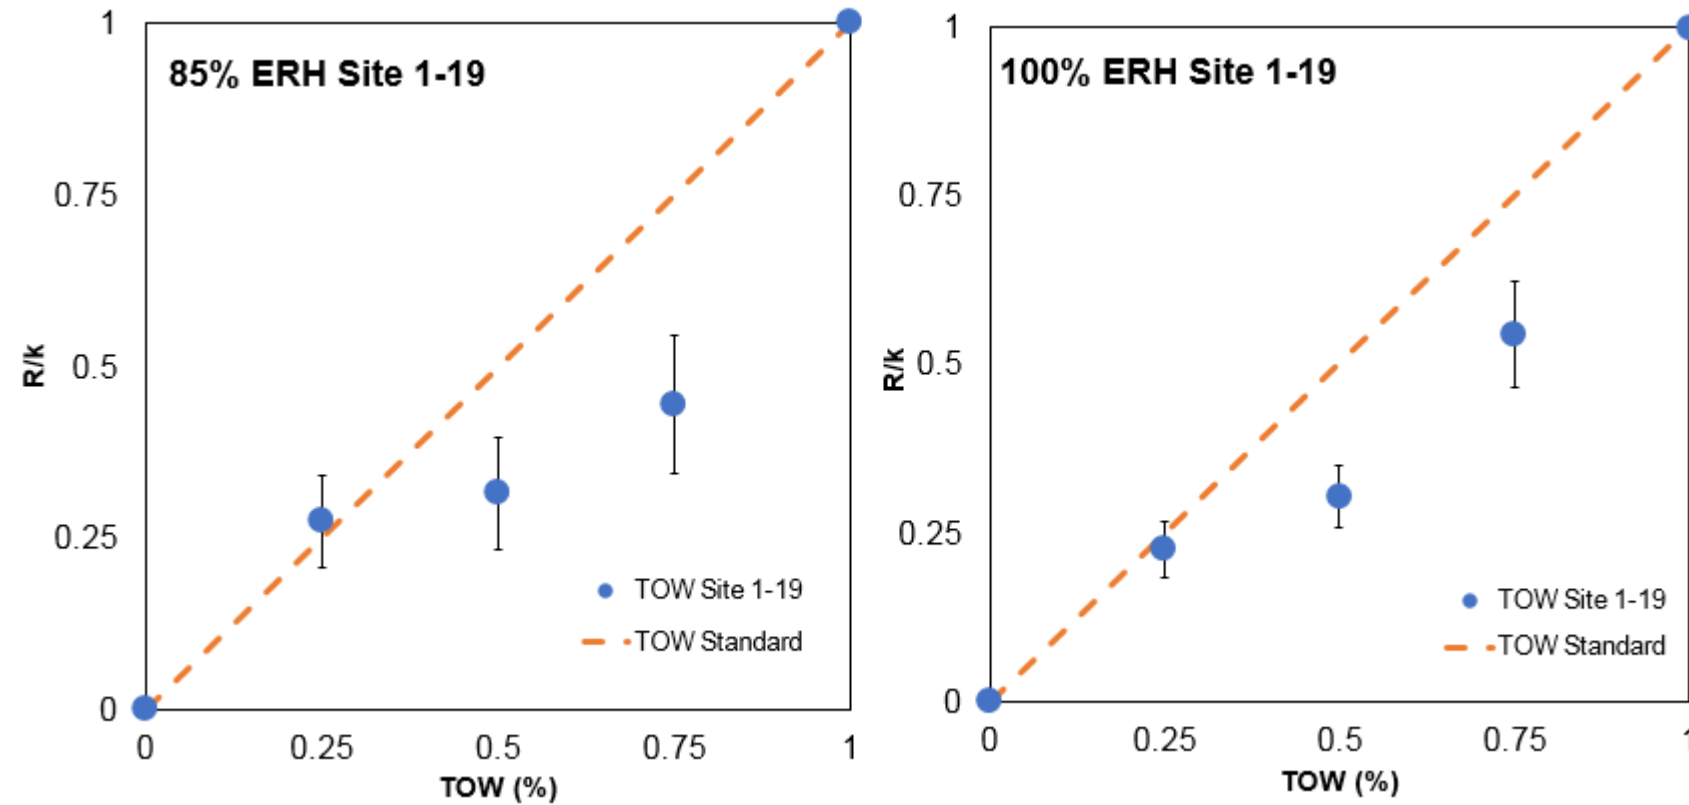

Apply Time of Wetness model

Adan, O., Huinink, H. "Fungal Growth & Humidity Fluctuations: A Toy Model. *Fundamentals of Mold Growth in Indoor Environments and Strategies for Healthy Living*. 2011

We can model fungal growth in carpet and dust based on moisture availability

Carpet TOW data

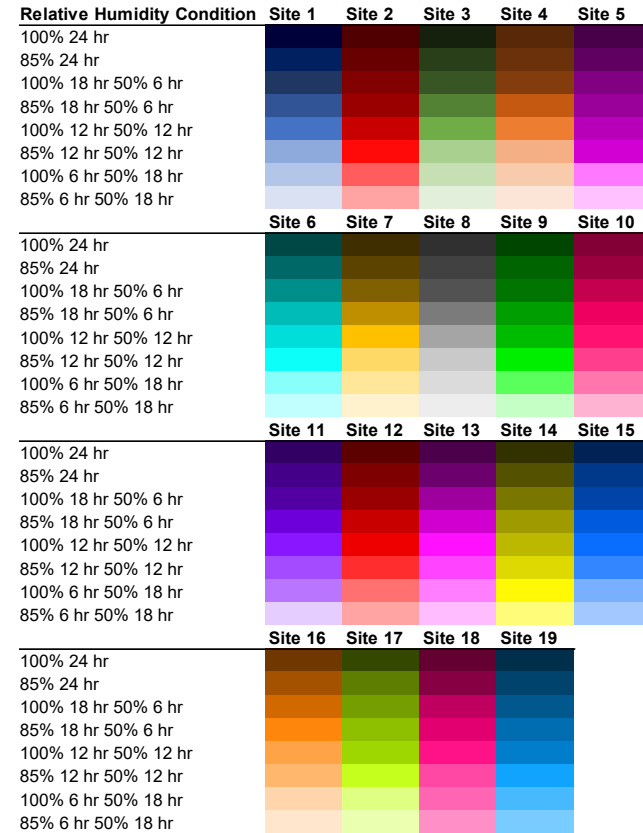

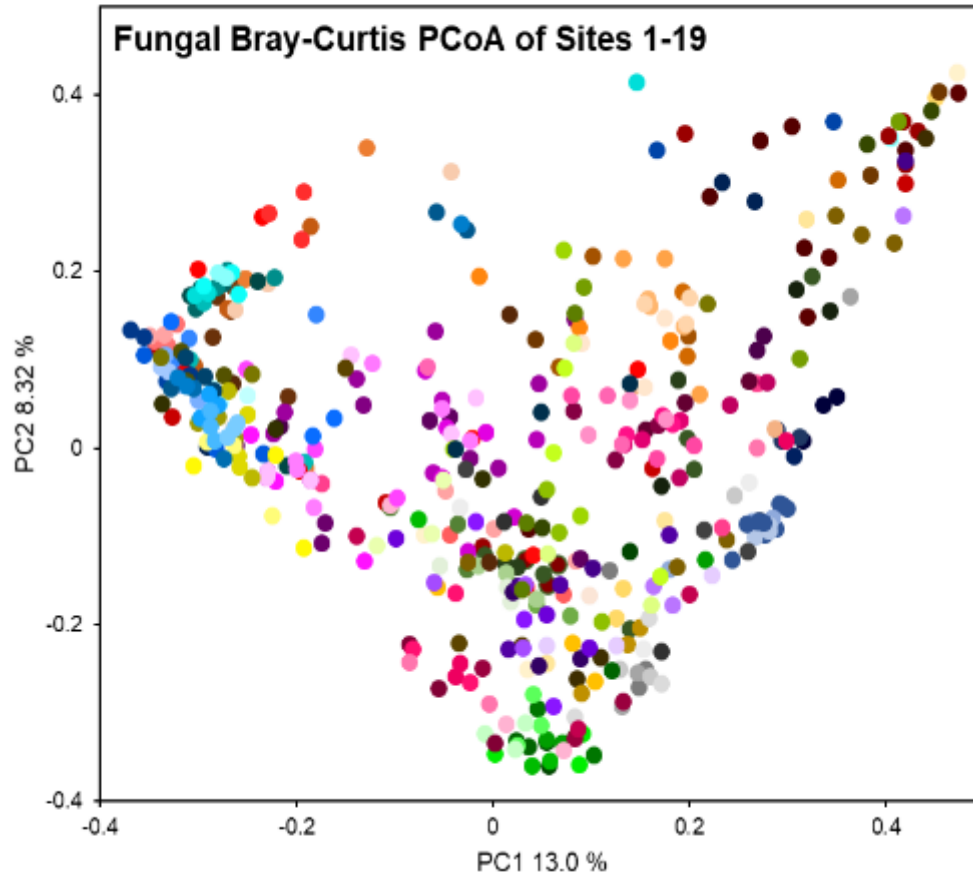

Standard TOW Model

Adan, Olaf C. G., and Robert A. Samson. (2011) "Fundamentals of Mold Growth in Indoor Environments and Strategies for Healthy Living", *Wageningen: Wageningen Academic*

Prior quantitative mold tests are based on an incorrect assumption

Haines, Siegel, Dannemiller. *Indoor Air*. 2020.

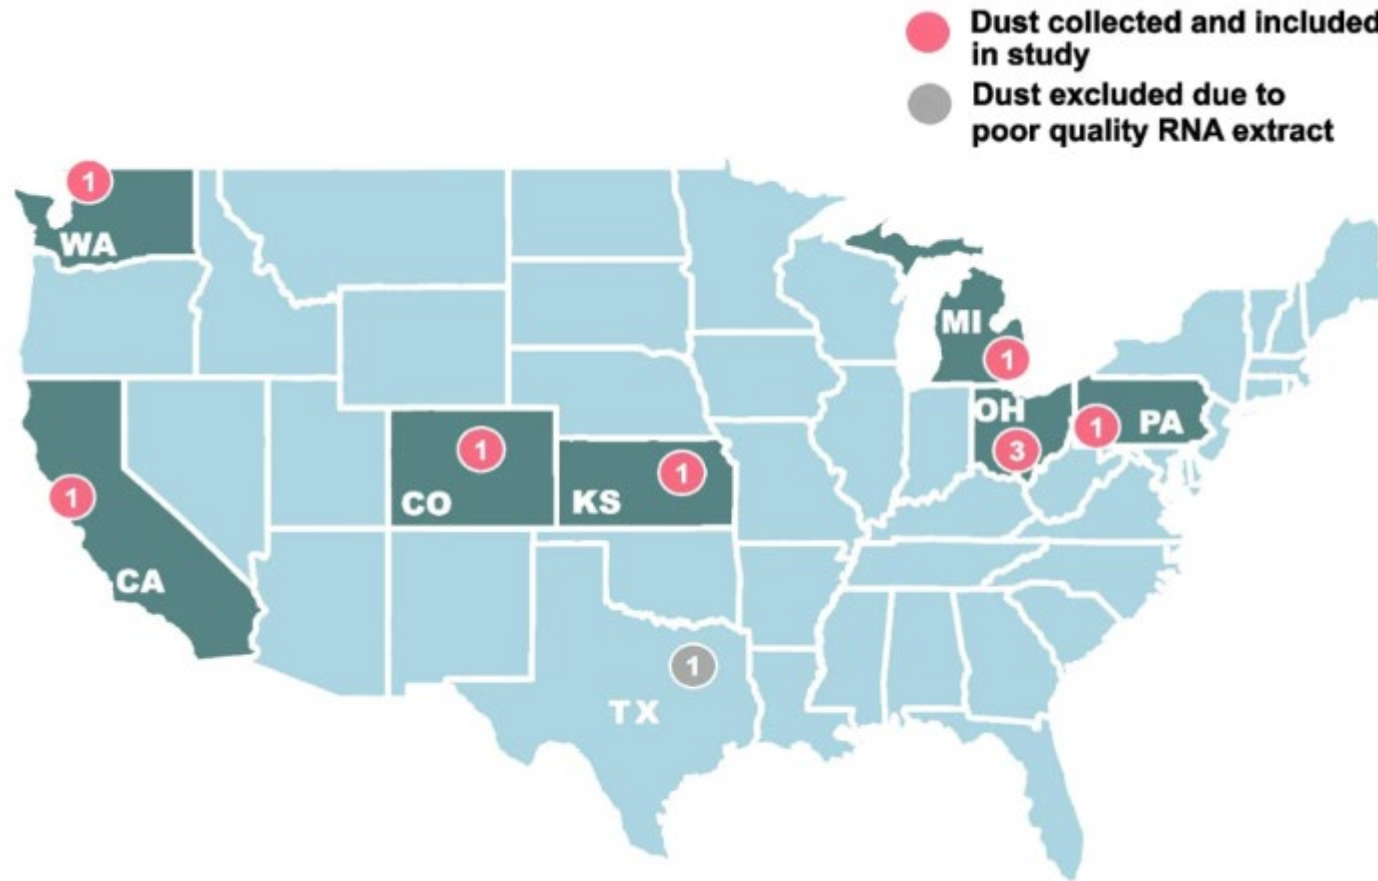

Many prior mold sampling tests are based on taxa

Association with health outcome

Mendell and Adams, Indoor Air, 2019

So let's look at fungal function

It's so clear when we look at function

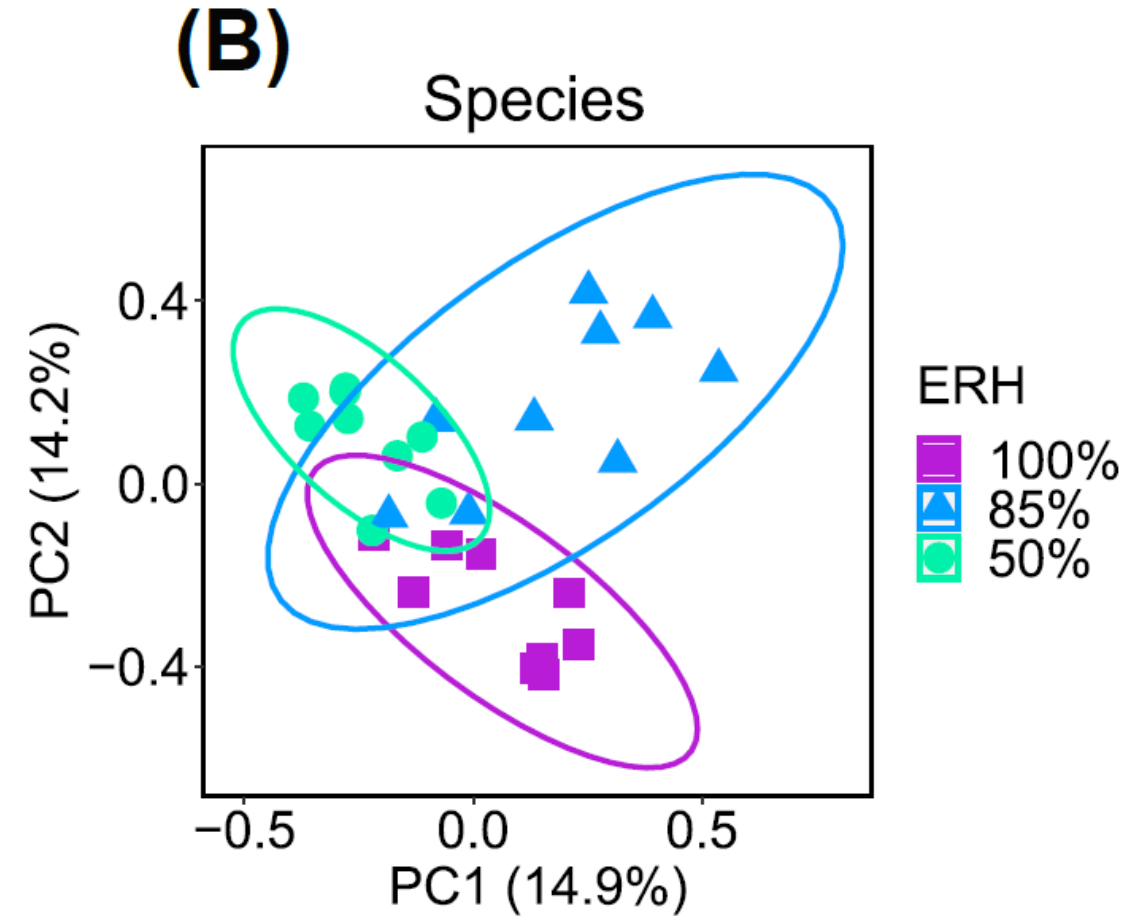

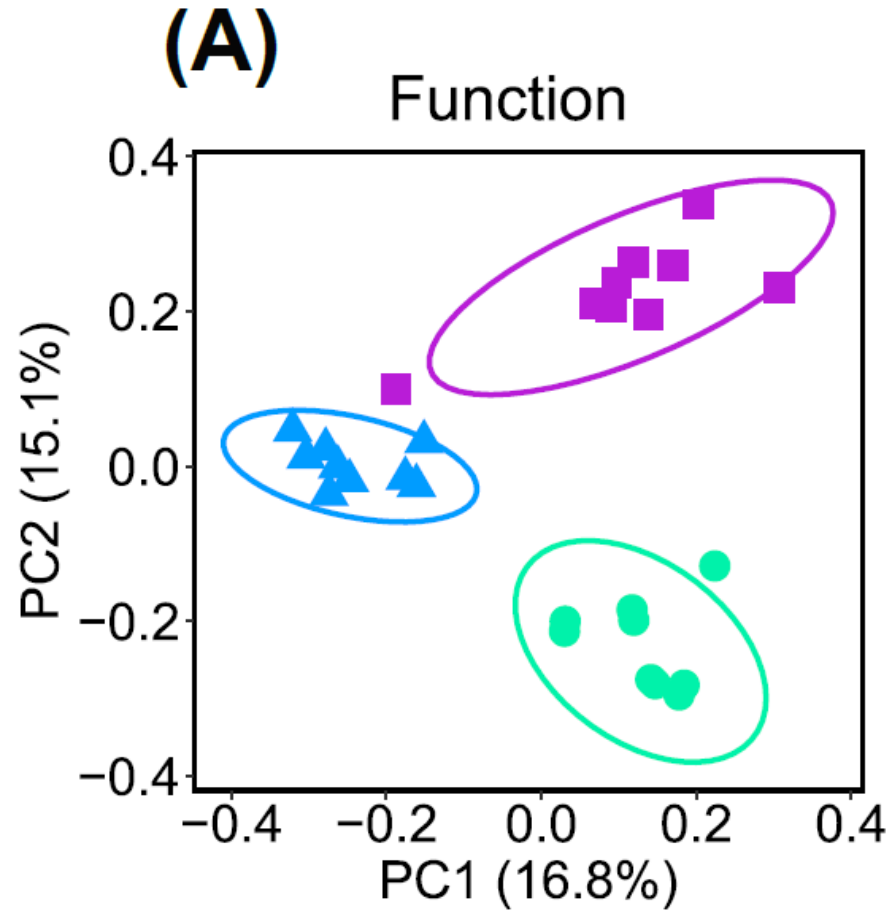

Neeraja
Balasubrahmaniam

Jon King

Collaborator
Bridget
Hegarty

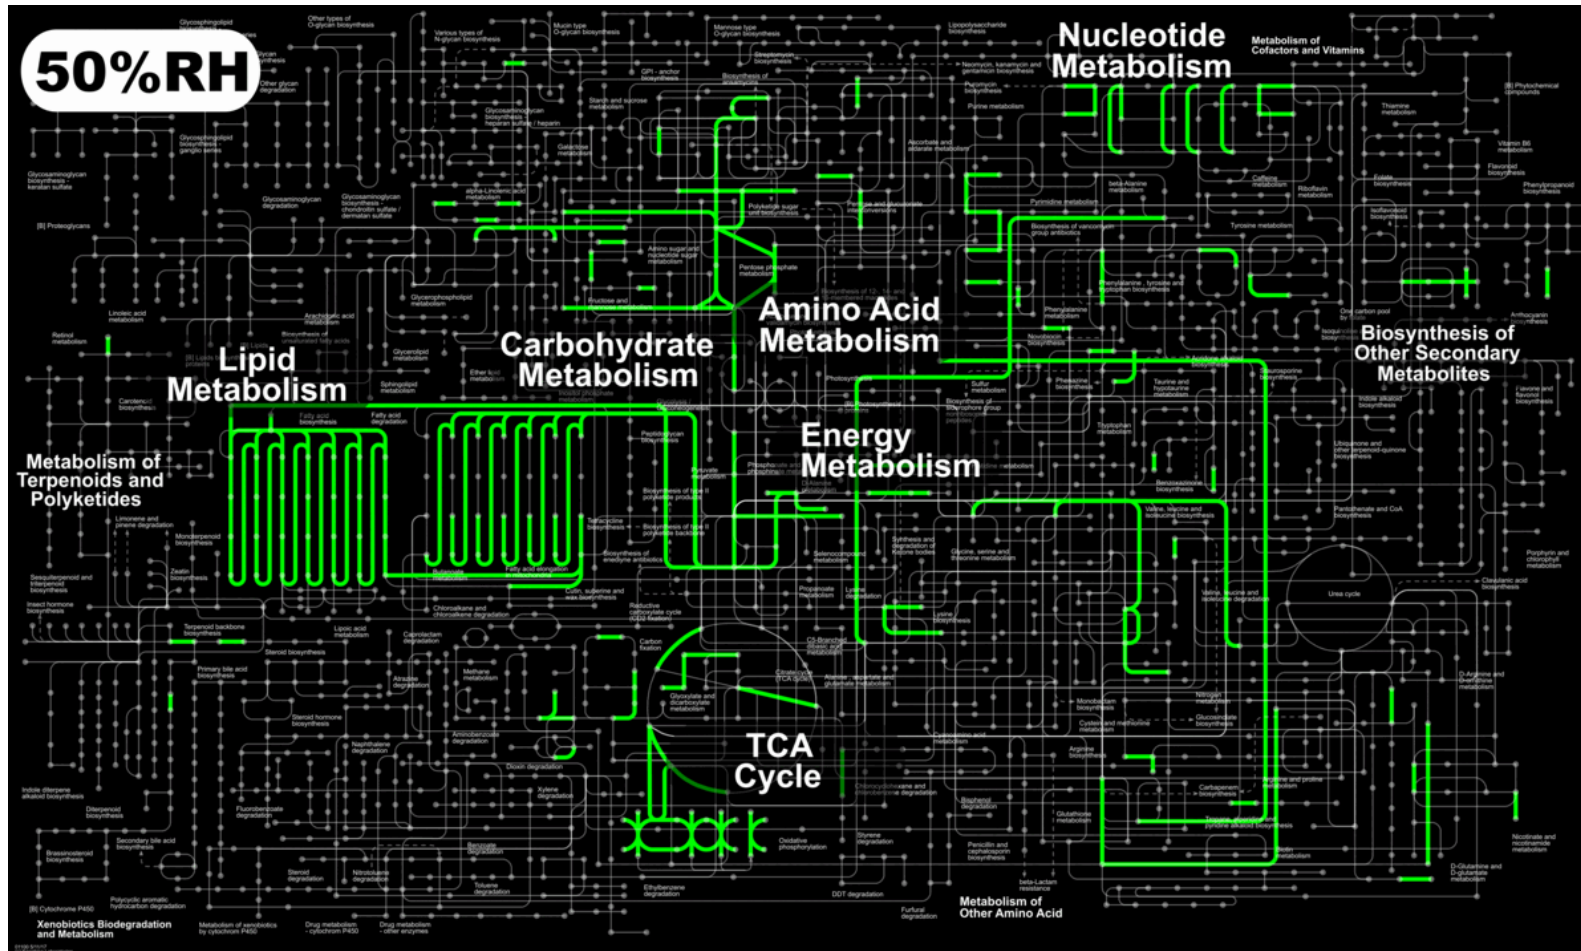

Balasubrahmaniam, King, Hegarty, and Dannemiller. *Microbiome*. 2024.

You can see the difference Low → High RH

More secondary metabolic gene expression at higher moisture conditions

Balasubrahmaniam, King, Hegarty, and Dannemiller. *Microbiome*. 2024.

Growth at increased water activity increases allergen potency

Hegarty, Dannemiller, & Peccia. *Indoor Air*

From these terms

- We can identify potential protein targets that will be consistently associated with mold growth in homes
- Now developing tests for top targets
- Four RNA targets are being validated in 35 homes

Microbial growth is problematic on Earth and in space

Mir suffered from microbial growth

Mold growth on fabric panels on ISS from wet hanging towels

Microb. Ecol., vol. 47, no. 2, pp. 133–136, 2004

Res. Microbiol., vol. 159, no. 6, pp. 432–435, 2008

Ashleigh Bope

John Horack

Marit Meyer (NASA)

Original dust has few microbes; Looks similar to carpet

Original Dust

Carpet from Earth

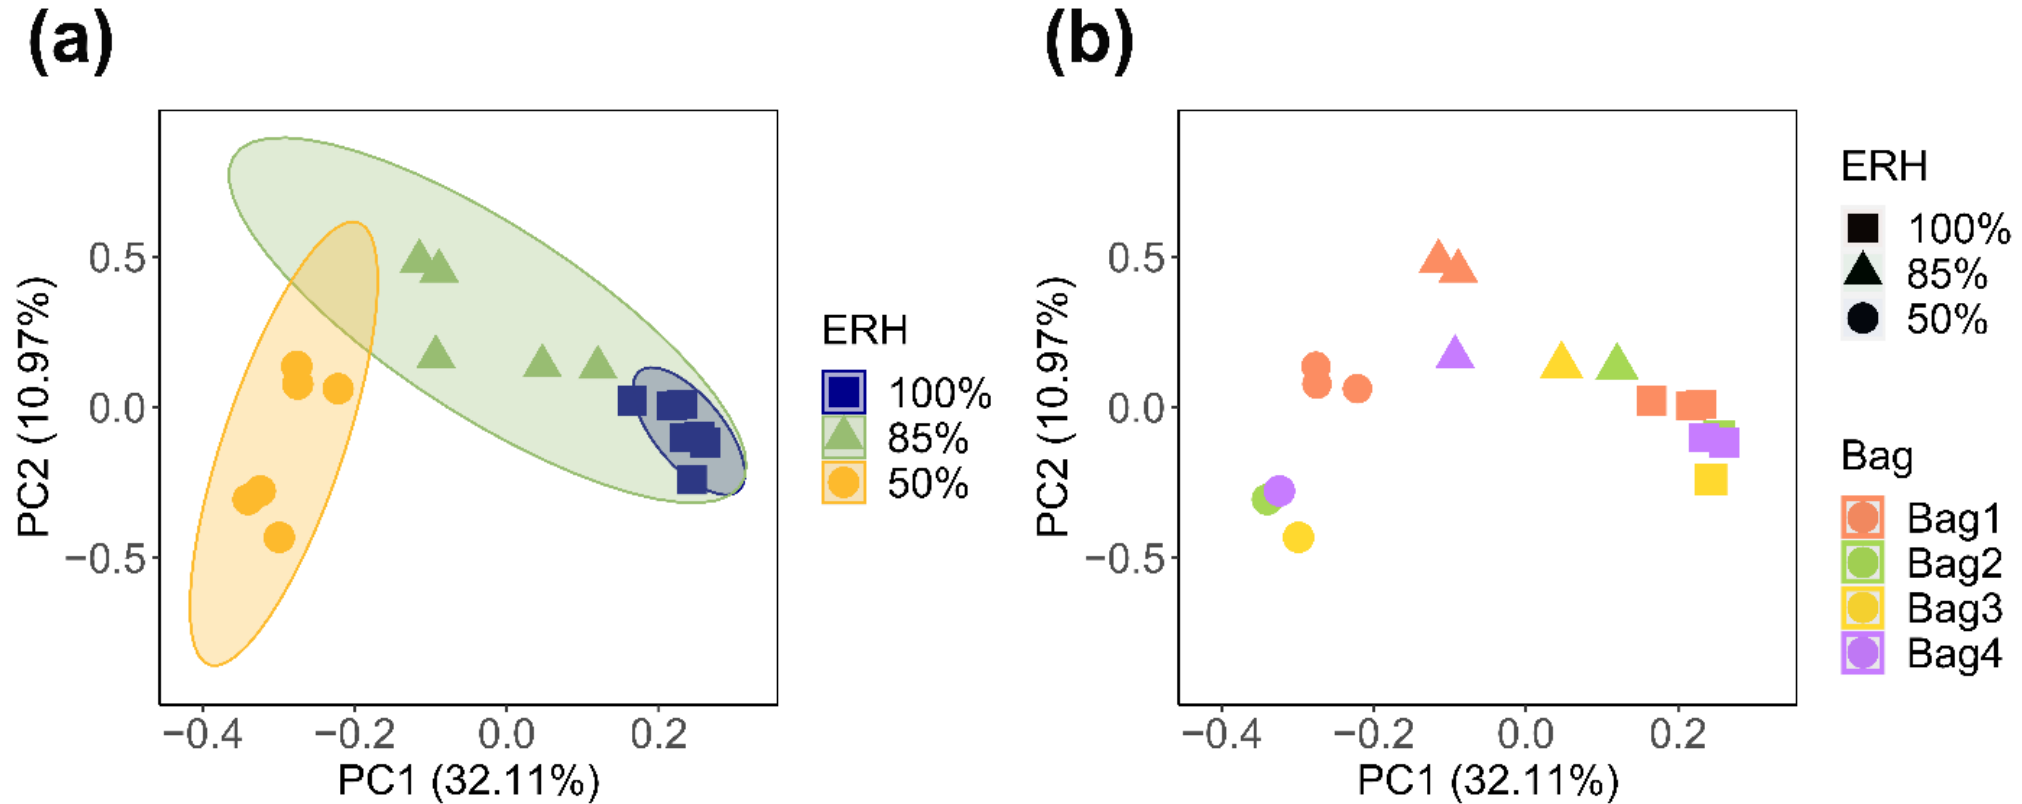

Nastasi et al. *Microbiome*. 2024.

Dust incubated at higher RH has growth; Models a ventilation system failure scenario

Nastasi et al. *Microbiome*. 2024.

Moisture is also an important driver of microbial function in spacecraft

Balasubrahmaniam, et al. *Scientific Reports*.

This work can improve environments on Earth and in space

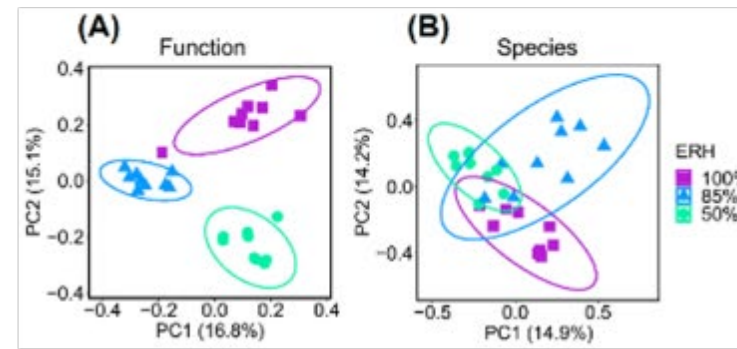

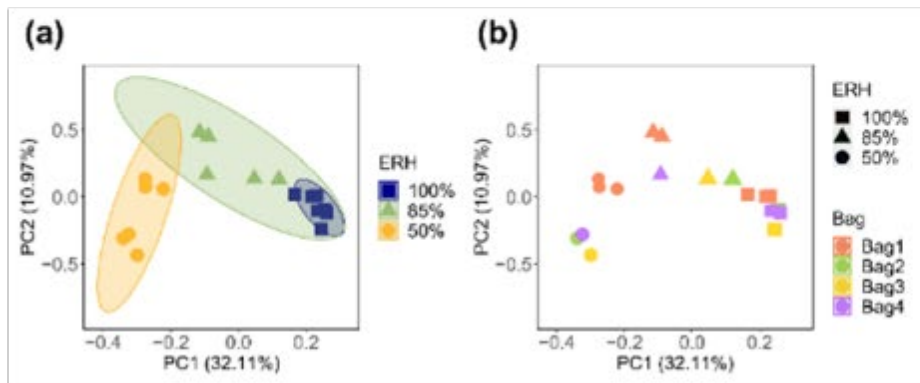

ISS DUST

Earth-based Dust and Carpet

Nastasi et al., Building and Environment, 2020
<https://doi.org/10.1016/j.buildenv.2020.106774>

Part 1 Summary

- Elevated moisture is sufficient to support microbial growth and function in dust
- We can use this information to develop a better mold indicator

Part 2: Viral Disease Monitoring

Goal: Dust as a matrix for outbreak surveillance

Solutions: **Wastewater Monitoring**

Building Monitoring????

Individual Testing

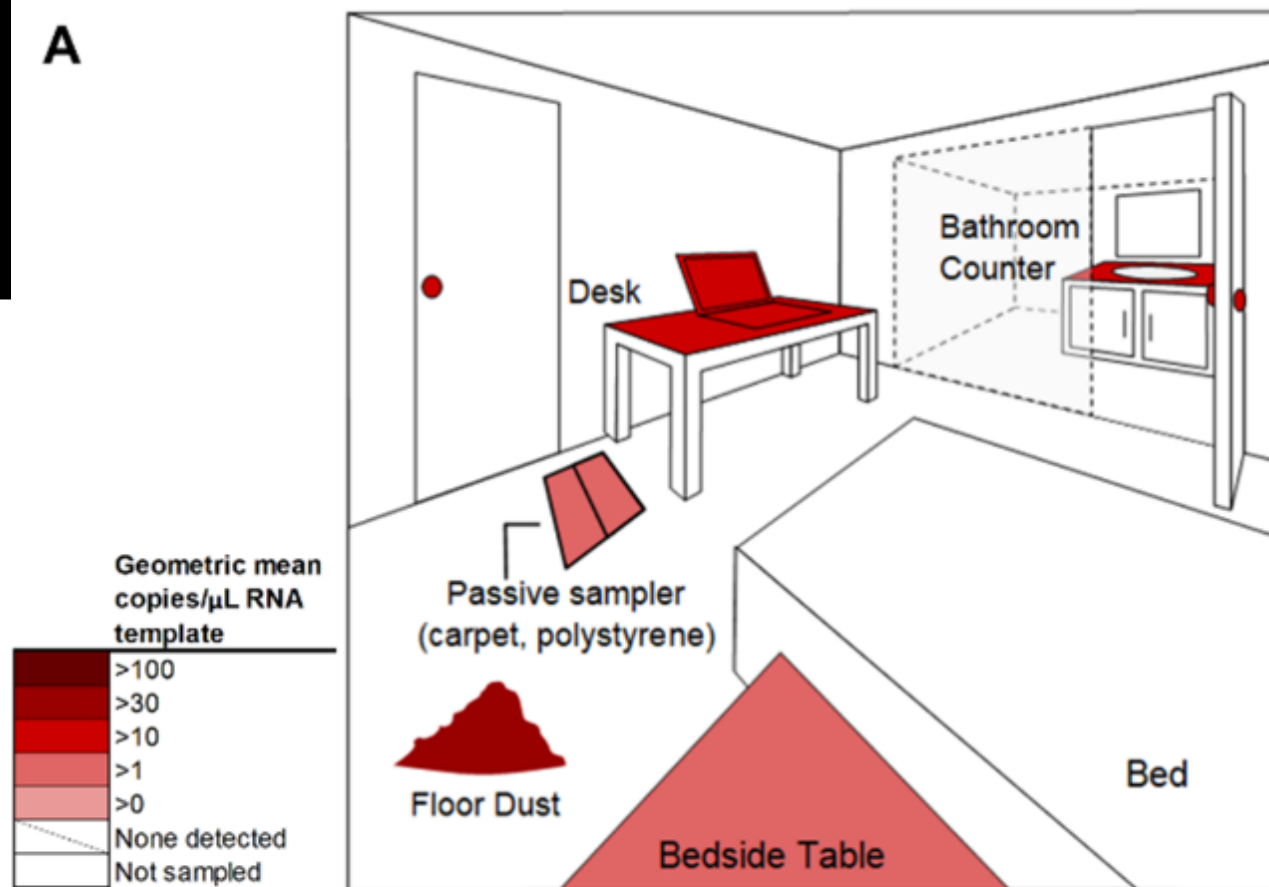

A

Sample types	n (RT-qPCR, dPCR, ddPCR)	RT-qPCR	dPCR	ddPCR	Average
Floor Dust	51,63,65	[Dark Red]	[Dark Red]	[Dark Red]	[Dark Red]
Bathroom Counter	1,2,2	[Dark Red]	[Dark Red]	[Dark Red]	[Dark Red]
Door Knobs	2,2,3	[Dark Red]	[Dark Red]	[Dark Red]	[Dark Red]
Laptop	1,4,2	[Light Red]	[Dark Red]	[Light Red]	[Light Red]
Polystyrene	1,5,2	[Light Red]	[Dark Red]	[Light Red]	[Light Red]
Desk	0,4,2	[None detected]	[Dark Red]	[Light Red]	[Light Red]
Bedside Table	0,2,1	[None detected]	[Dark Red]	[Light Red]	[Light Red]
Carpet	0,9,1	[None detected]	[Dark Red]	[Light Red]	[Light Red]

- Samples collected from rooms of students in isolation with positive test
- Bulk dust, surface swabs, passive sampler

Pilot data from spring – Residence Hall

Individual tests

Sequencable for variants

* Non-Detect

+ NOT COLLECTED

Can identify patterns across multiple residence halls and public buildings

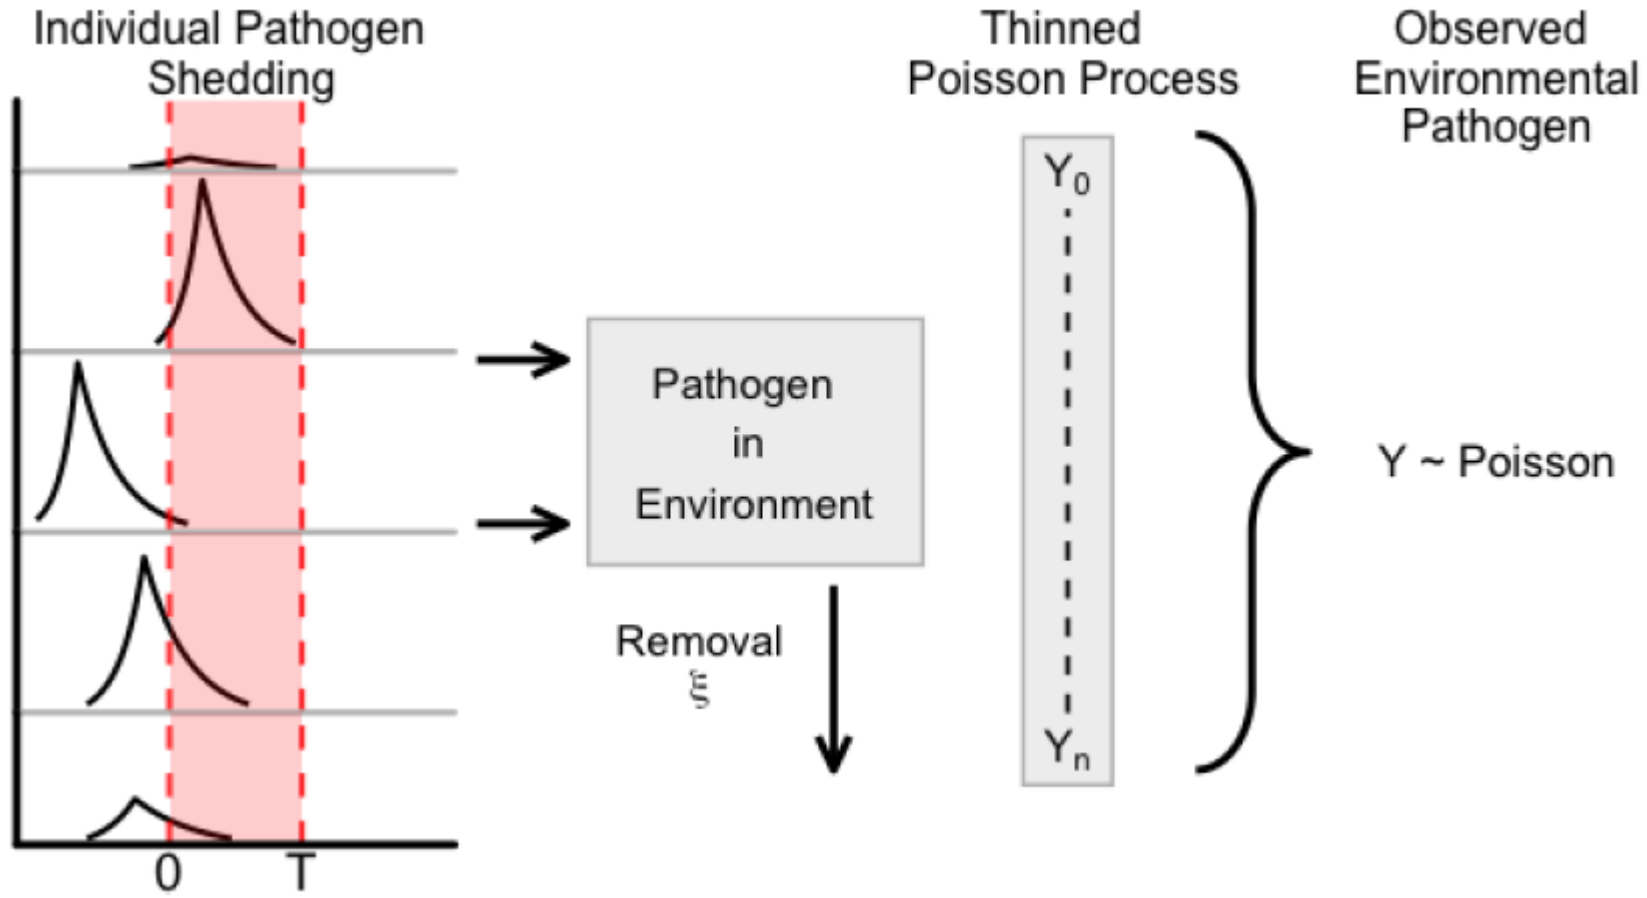

- Not-measured
- Non-detect - <10 copies/mg-dust
- 10 – 100 copies/mg-dust
- >100 copies/mg-dust

Correlations exist but data is messy

SARS-CoV-2 concentrations in dust vs. cases in the same building from spring 2022 ($R=0.22$, $p=0.00004$)

Statistical modeling helps

We can estimate disease prevalence

1 Individual Shedding

40 Individuals Shedding

We can track variants across many buildings

Van Dusen et al., *PLOS One*, 2024

This can be applied to other viruses

- 27 samples
- 54 viruses

Shamblin et al., *In Revision*

Distro A: Cleared for Public Release, AFRL/PA, AFRL-2025-5627, 11 Dec 25.

Viral concentrations in dust differ by virus

Figure 4a:

Figure 4b:

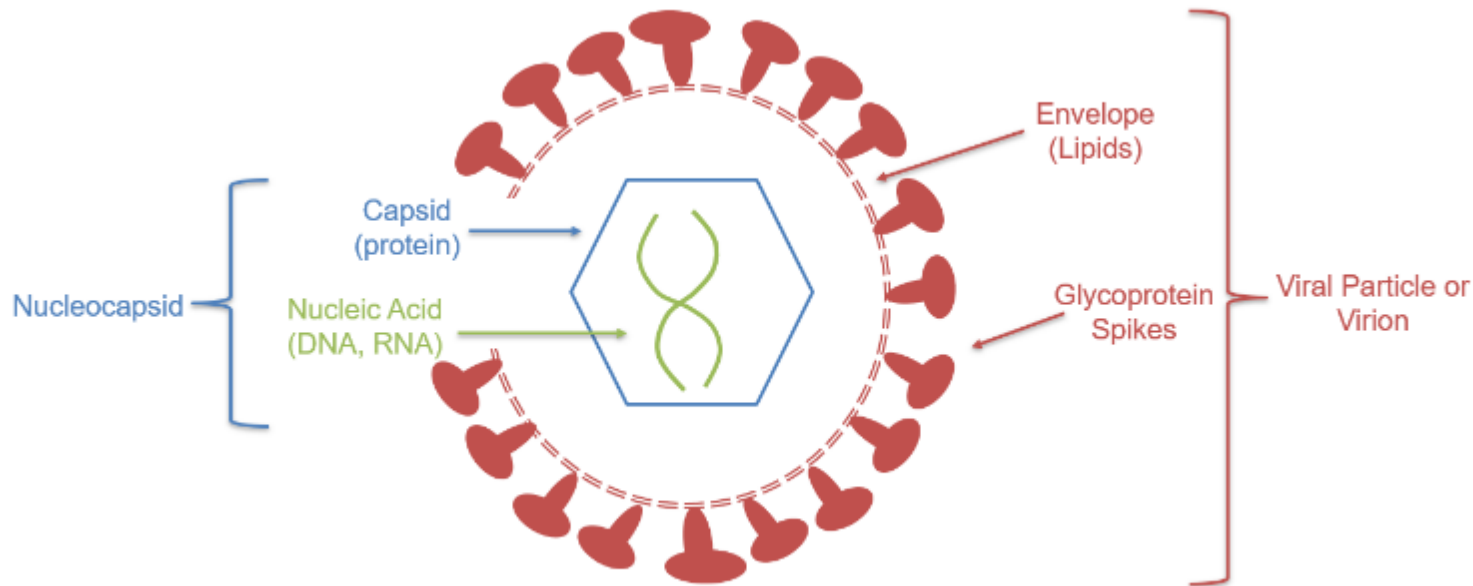

● Dust Data — US Data — Ohio Data

Shamblin et al., *In Revision*

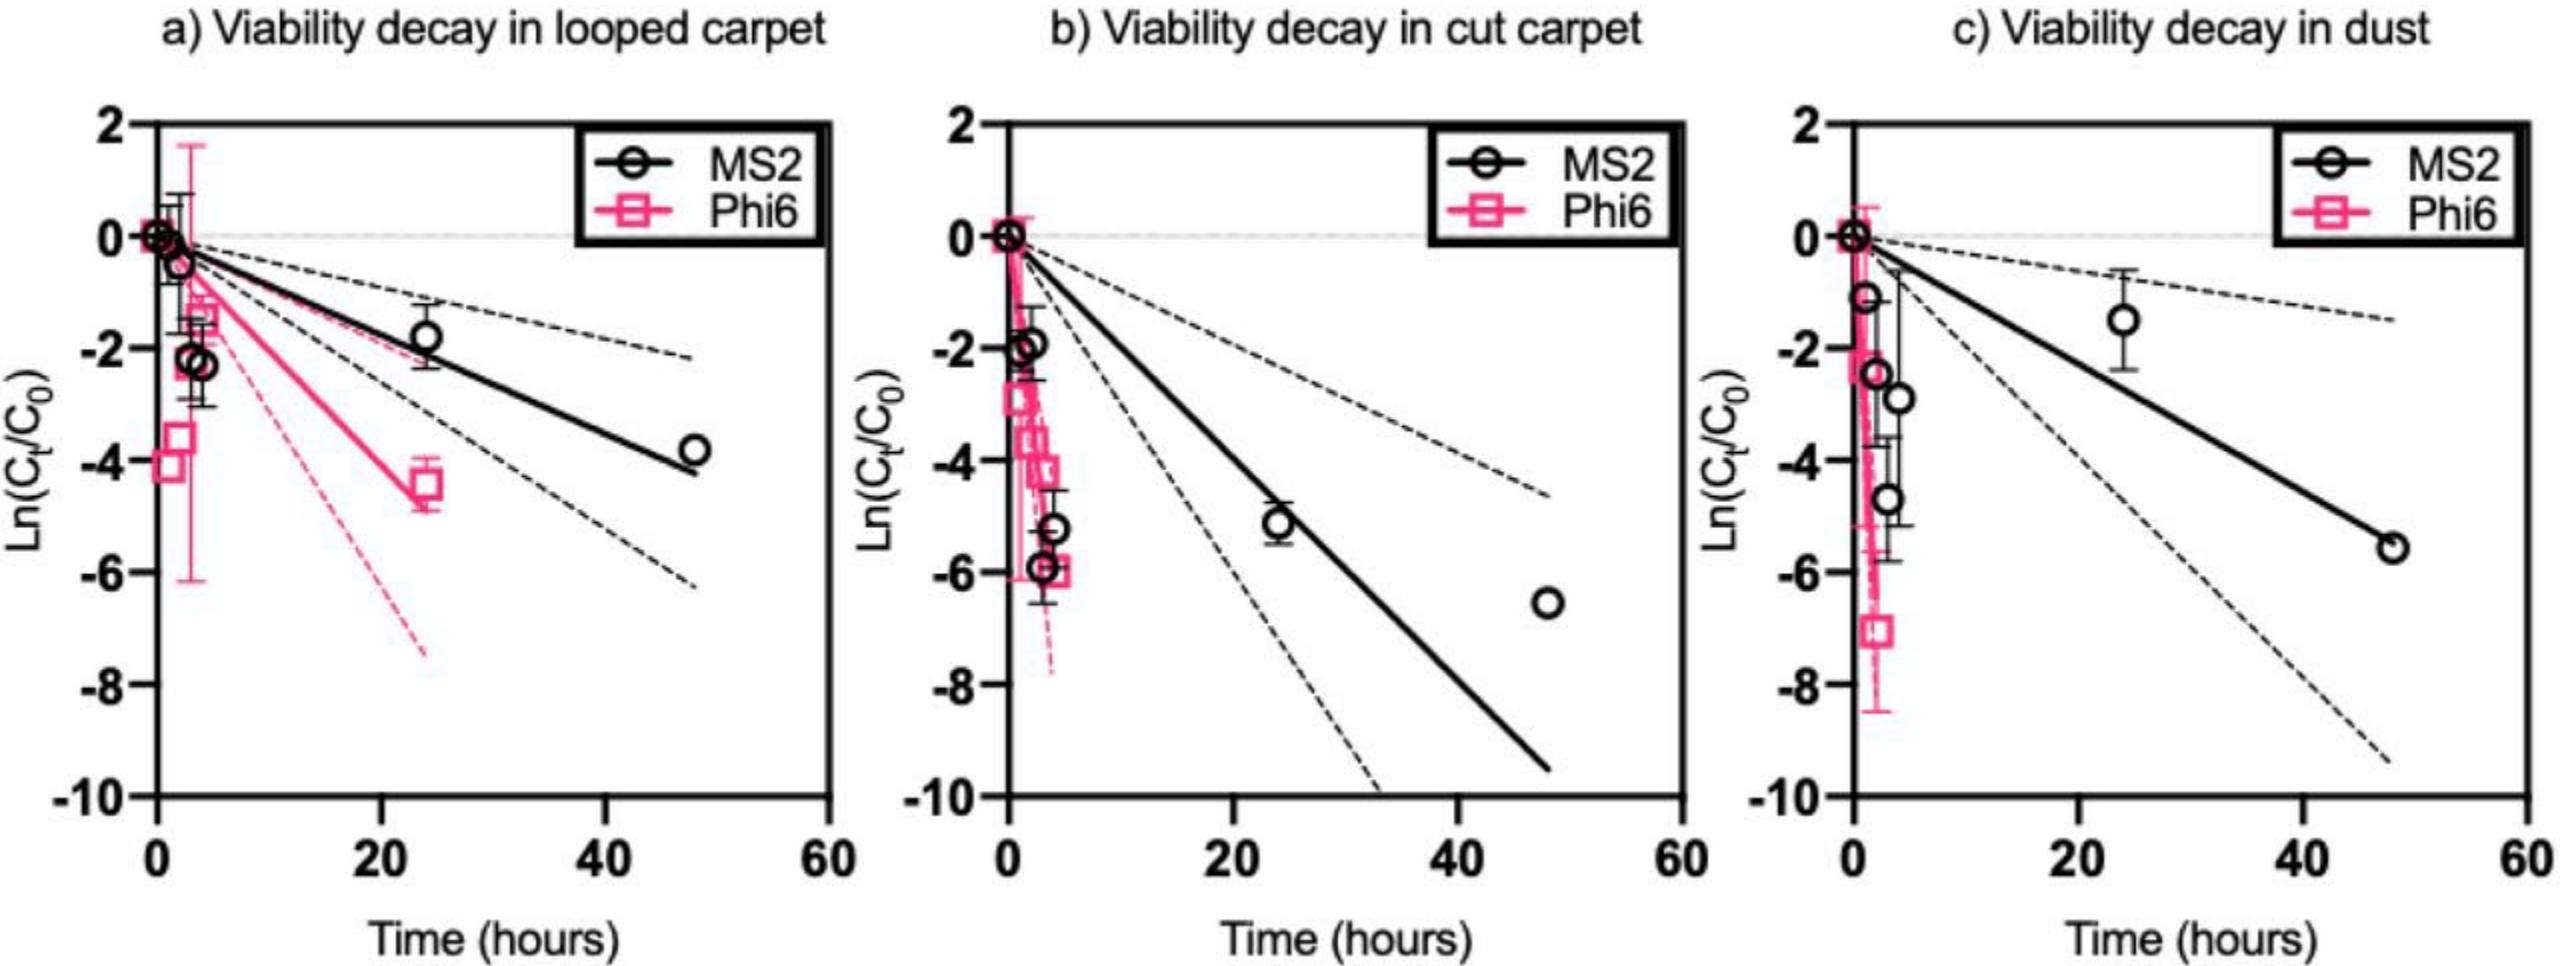

Distro A: Cleared for Public Release, AFRL/PA, AFRL-2025-5627, 11 Dec 25.

So what does this mean about viability in dust and on surfaces?

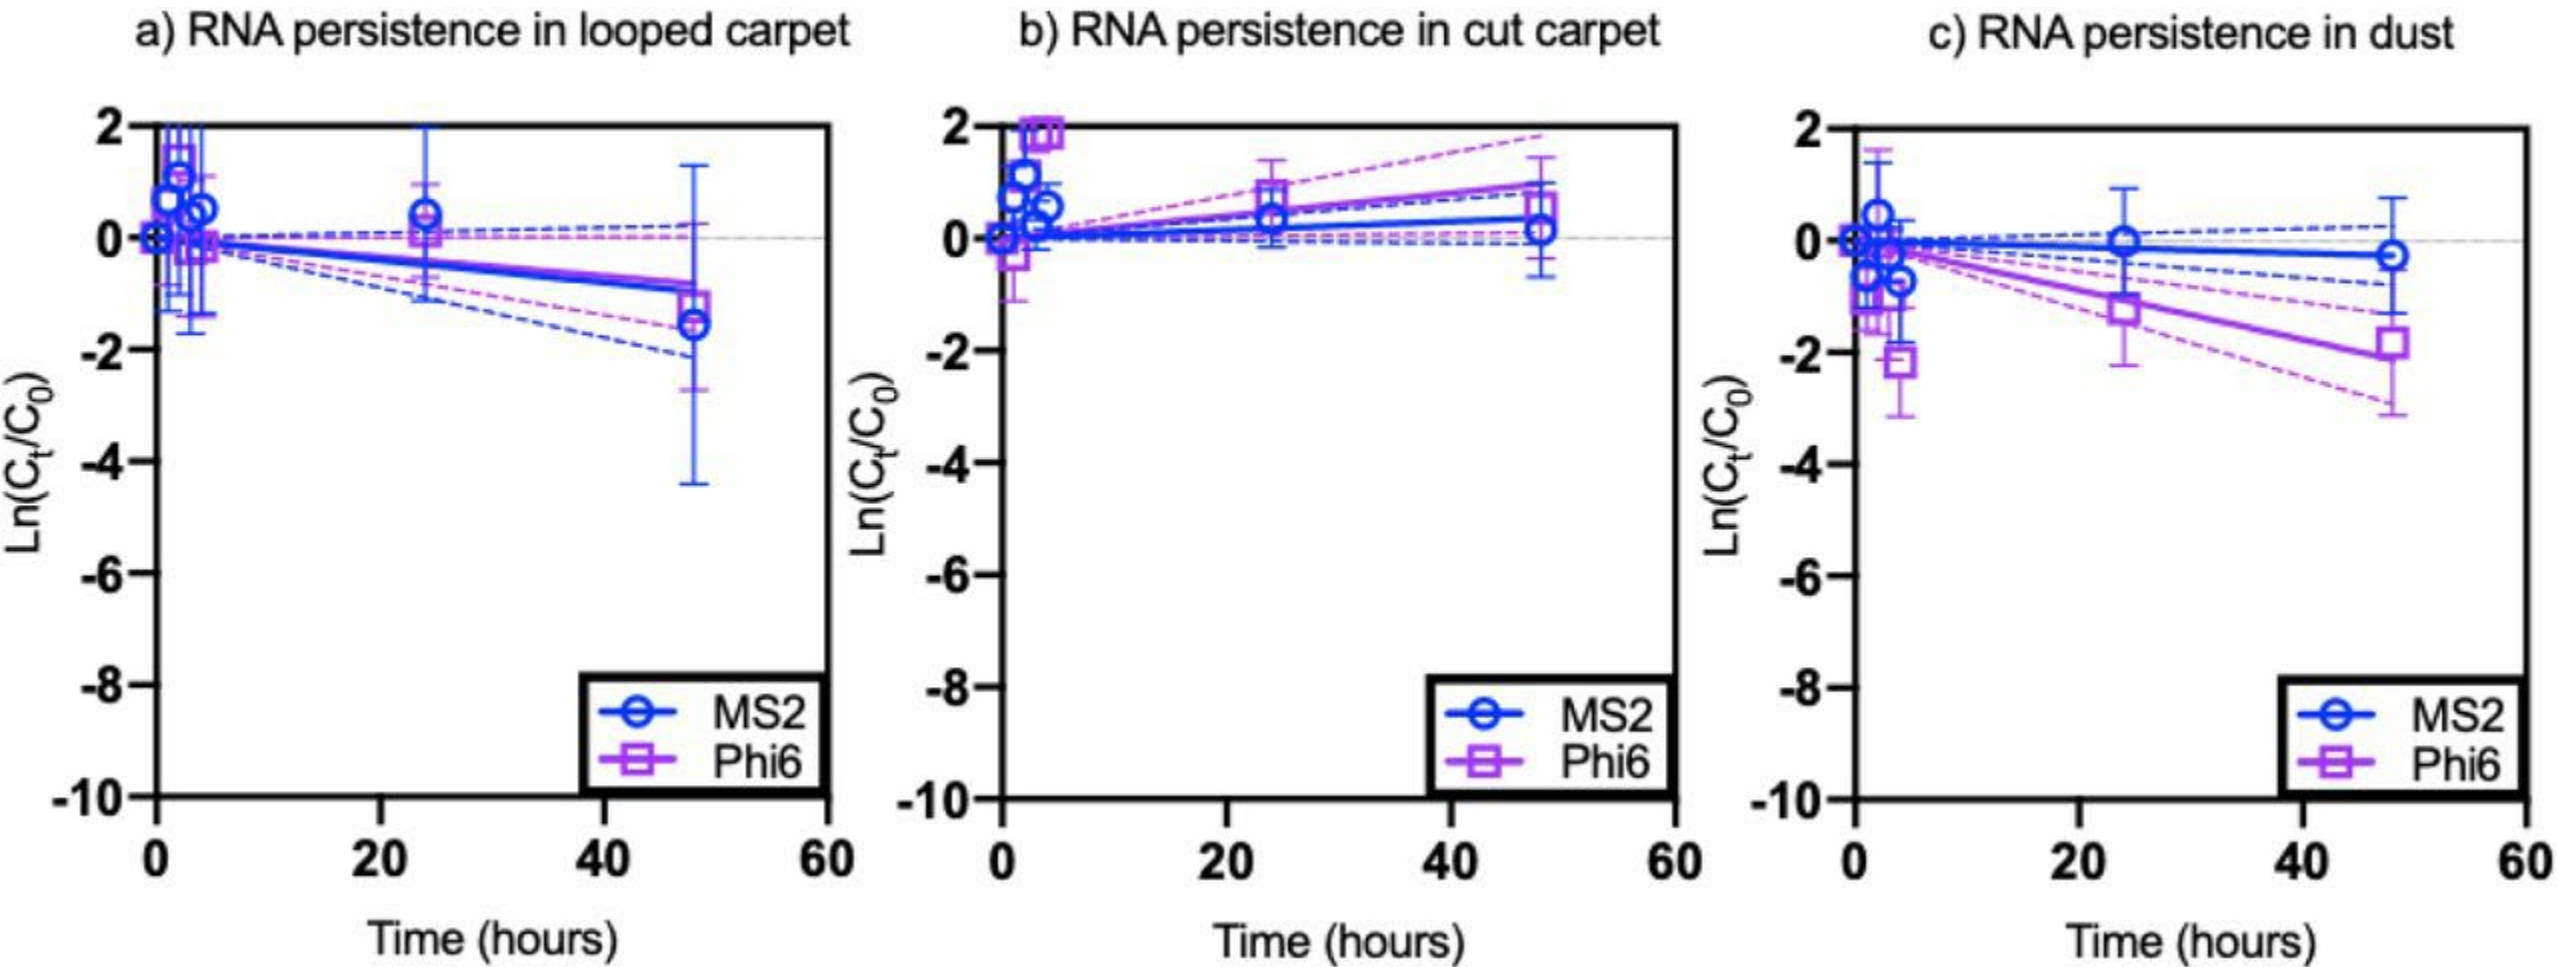

Essentially Nothing.

Enveloped viruses decay more quickly than non-enveloped

RNA persists

Removal by cleaning methods vary

(A) Viability persistence of MS2 and Phi6

(B) RNA persistence of MS2 and Phi6

Dust monitoring: A new long-term viral monitoring tool

Solutions: **Wastewater Monitoring**

Building Dust Monitoring

Individual Testing

Part 2 Summary

- We can look for pathogens in indoor spaces now that we know where to look

Part 3: Detection. Multifactorial interventions are necessary to address housing quality

Mold/Dampness

Pests

Environmental Tobacco Smoke

Pollution

Pets

Pathogens

Pollen

We need improved identification of the hazards in each home for efficient resource allocation

- Children sensitized and exposed to allergens have worse outcomes
- Need to be able to measure allergens in homes
 - Current methods are difficult and results are delayed
 - Empower cost-effective asthma homecare programs

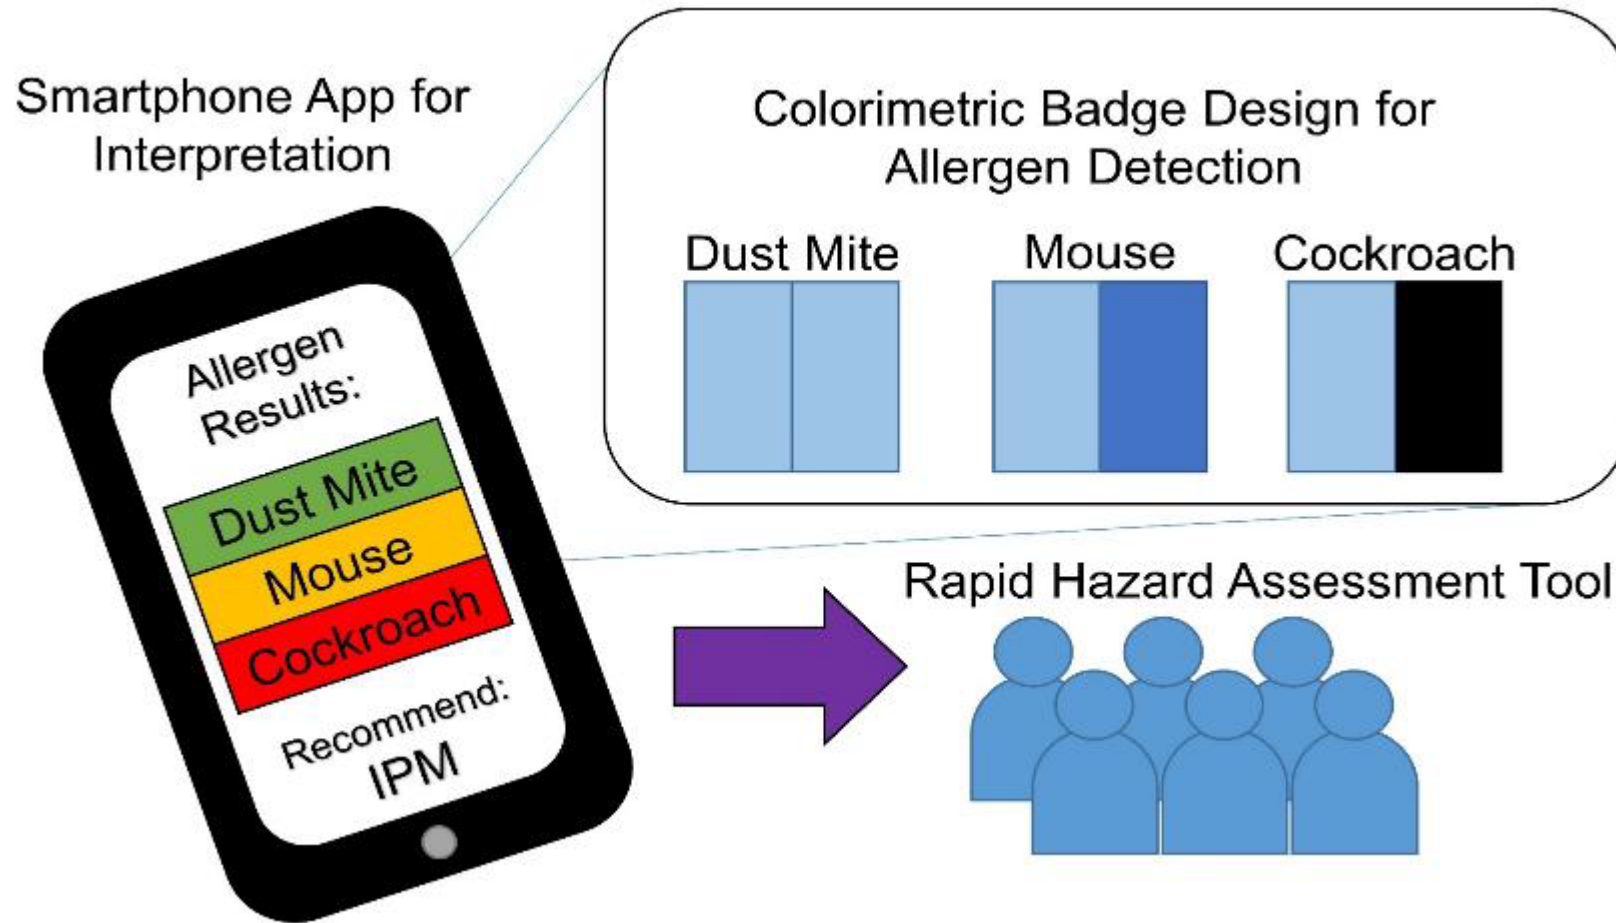

NCH Asthma Express Program Components

- Home assessments by nurses
- Environmental trigger identification (mold, dust, allergens)
- Education for patients and caregivers on asthma management
- Support for adherence to medication plans

Goal: Develop smartphone-based system for point-of-care allergen detection

Use of these system highlights need for education

- 23% can define “allergen”
- 69% can list examples

Young et al., *Pediatric Allergy, Immunology, and Pulmonology*, 2024

BREATHE-Smart Test Unit under development

- Case prototype printed
 - Produced by the Center for Design and Manufacturing Excellence (CDME) at OSU
 - Will house the sensor

Results window

Complete sensor unit with case. Left: case only (3D-printed from synthetic resin), Right: the complete sensor inside the case

interior of the test unit (drawing)

Walt VanCleave, CDME, 2021
Dannemiller and Panescu, 2021

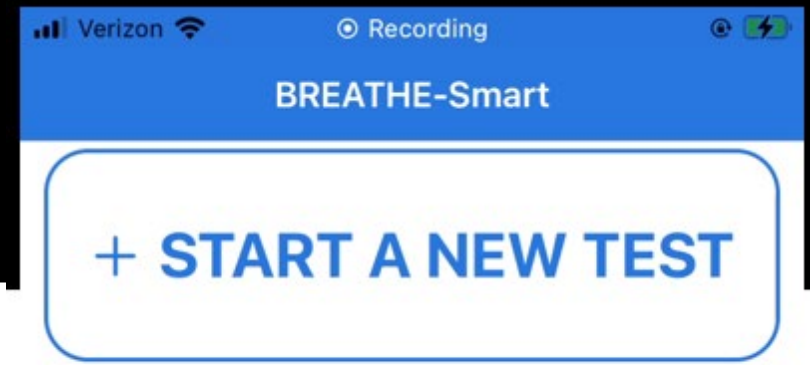

Line dispenser Test Video (Cockroach Blotting 2)

NOTE

Video will not be active in handout

User-friendly App Development

The app for the iPhone platform is completed

- Refinements
- Accessibility
- Will be tested with the sensor once it is completed

NOTE

Video will not be active in handout

Correction of poor lighting conditions

Zhang et al., *PLOS ONE*, 2023

Improved color determination: pH strip demo

Zhang et al., *PLOS ONE*, 2023

Smartphone measurements were 3x better than human eye

<https://doi.org/10.1371/journal.pone.0287099.t002>

Zhang et al., *PLOS ONE*, 2023

Part 3 summary: A new tool for asthma homecare programs

- Patient education: Many common allergens associated with asthma exacerbations are underrecognized
- Lateral flow assays offer opportunity for point-of-care allergen testing
- Smartphone technology can improve measurement accuracy

Summary: Time for application to support a Healthy Indoor Microbiome

Growth in dust contributes to human aerosol exposure

Species do change in a specific environment

(A) 2-Week Incubation Samples

(B) Time-of-Wetness Samples

Comparison to Earth

Earth-ISS Fungal Community Comparisons

(A) Original Dust Samples

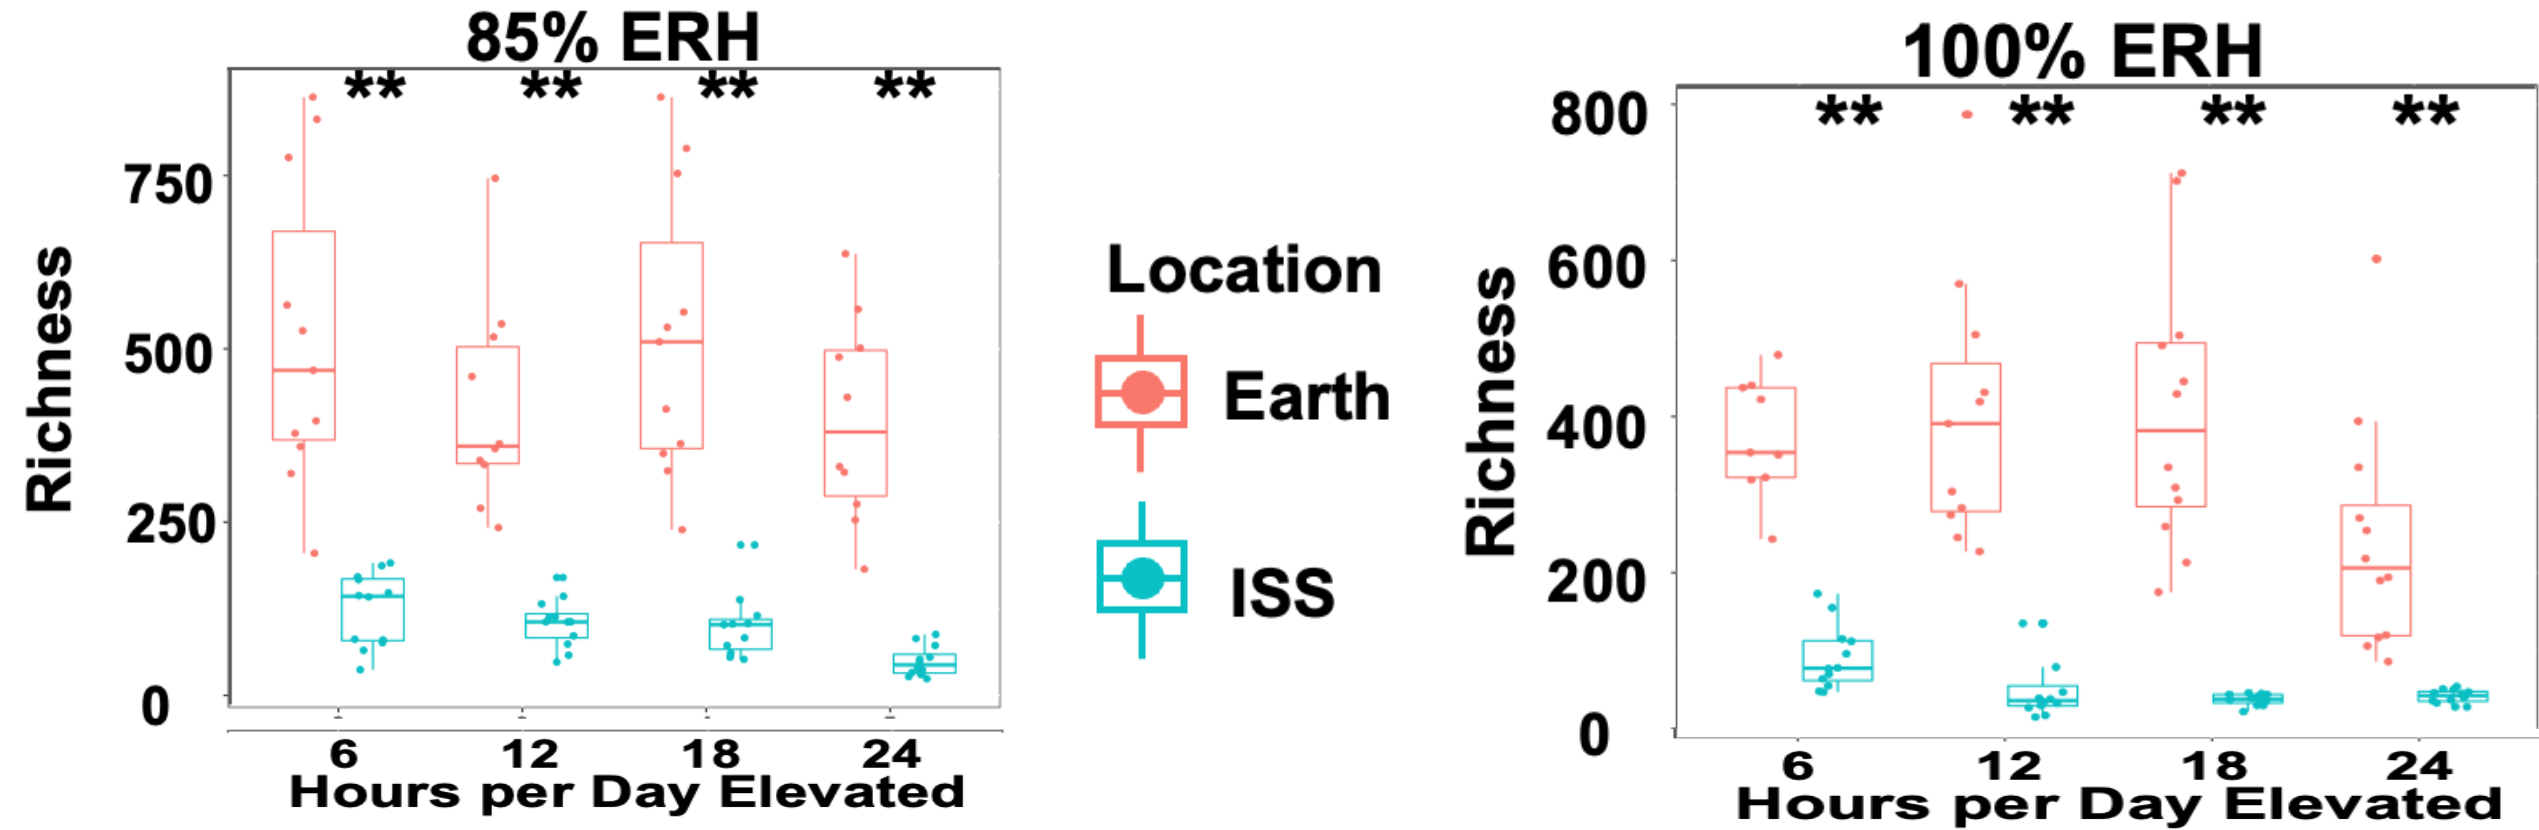

(B) Time of Wetness Samples

Fungal alpha diversity is significantly lower in ISS dust compared to Earth dust at all ERH conditions and times

** P < 0.001

Growth can be modeled using the time-of-wetness framework, even if RH fluctuates

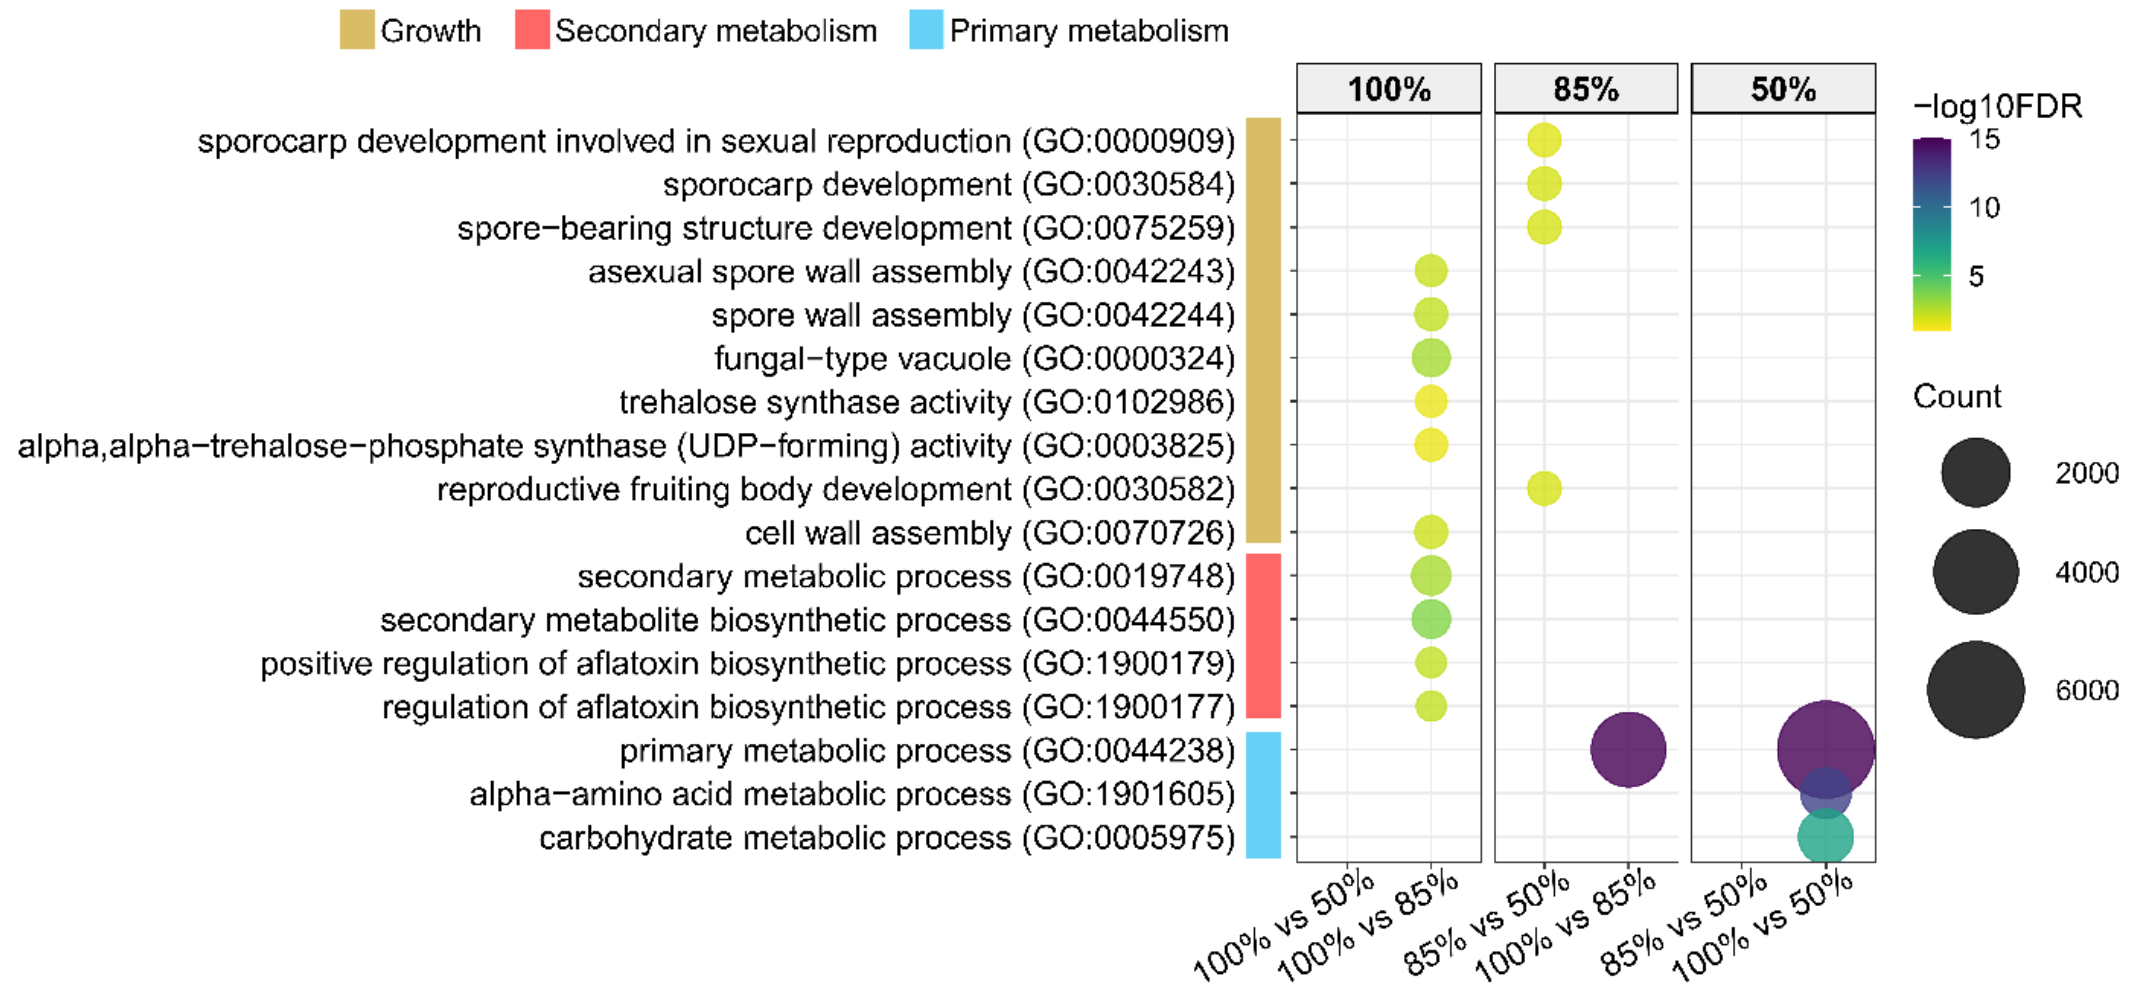

Growth-associated genes are upregulated at high RH

Growth-associated genes are upregulated at high RH

RH

Constant equilibrium relative humidity (ERH) conditions significantly more fungal growth starting at 80%

2-week incubations at each ERH condition

* $P < 0.05$

Fungal Carbon Utilization with Increased ERH

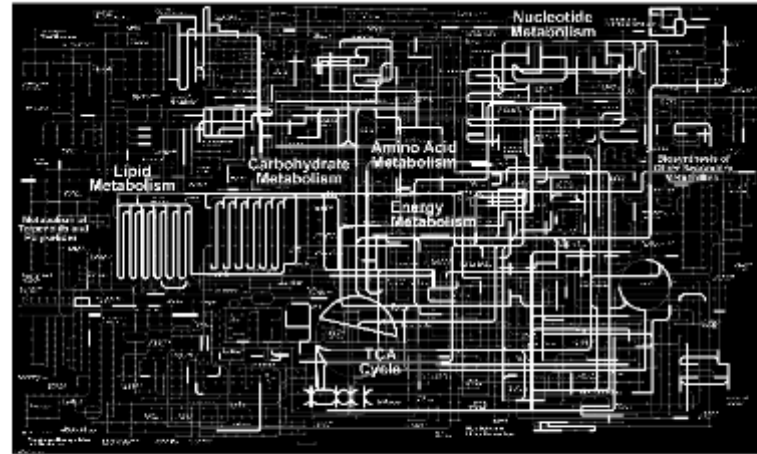

More genes are associated with dampness than species

Number of upregulated fungal genes and fungal species that are found to be more abundant at 100% compared to 50% and 85% compared to 50% (FDR-adjusted $p < 0.05$).

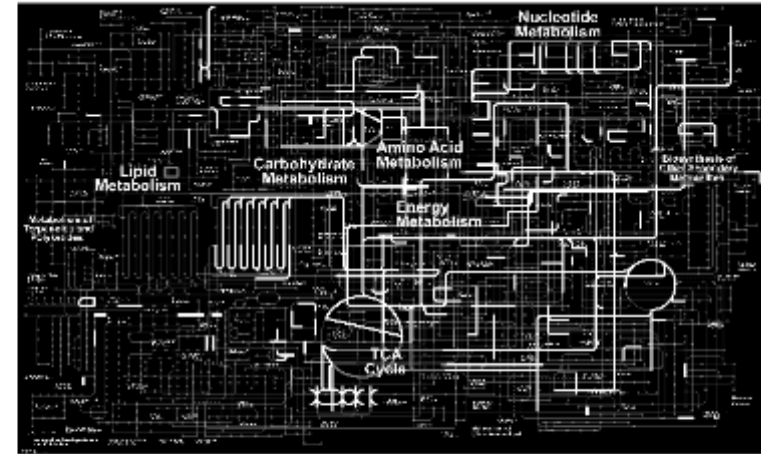

Gene Expression		
	Upregulated at 100% vs 50%	Upregulated at 85% vs 50%
Number of genes upregulated (FDR-adjusted $p < 0.05$)	4141	12845
Number of genes upregulated in at least 6/9 sites and not expressed at 50%	3188	5437
Number of genes upregulated in at least 8/9 sites and not expressed at 50%	2030	2528
Number of genes upregulated in all sites and not expressed at 50%	324	431
Taxa (Species)		
	More abundant at 100% vs 50%	More abundant at 85% vs 50%
Number of species differentially abundant (FDR-adjusted $p < 0.05$)	3	2
Number of species more abundant in at least 6/9 sites and not found at 50%	1	0
Number of species more abundant in at least 8/9 sites and not found at 50%	1	0
Number of species more abundant in all sites and not found at 50%	0	0

More secondary metabolic gene expression at higher moisture conditions

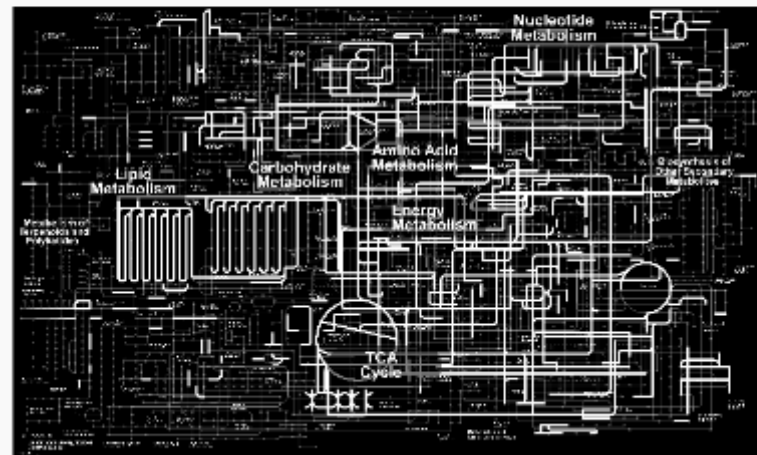

(a) Upregulated at 100% compared to 50%

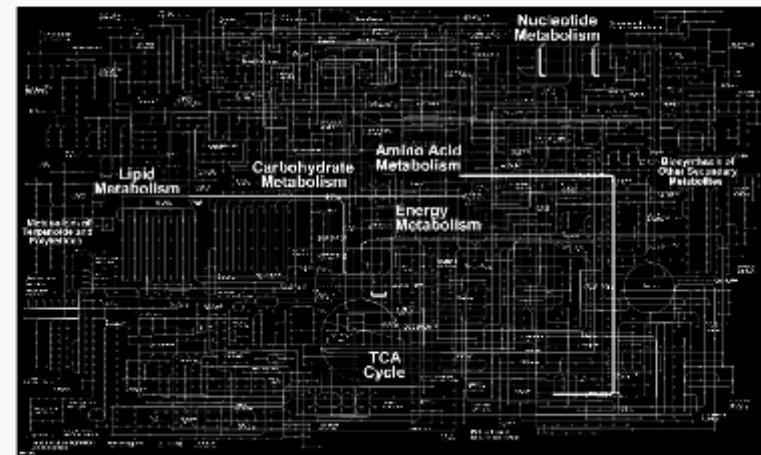

(b) Upregulated at 50% compared to 100%

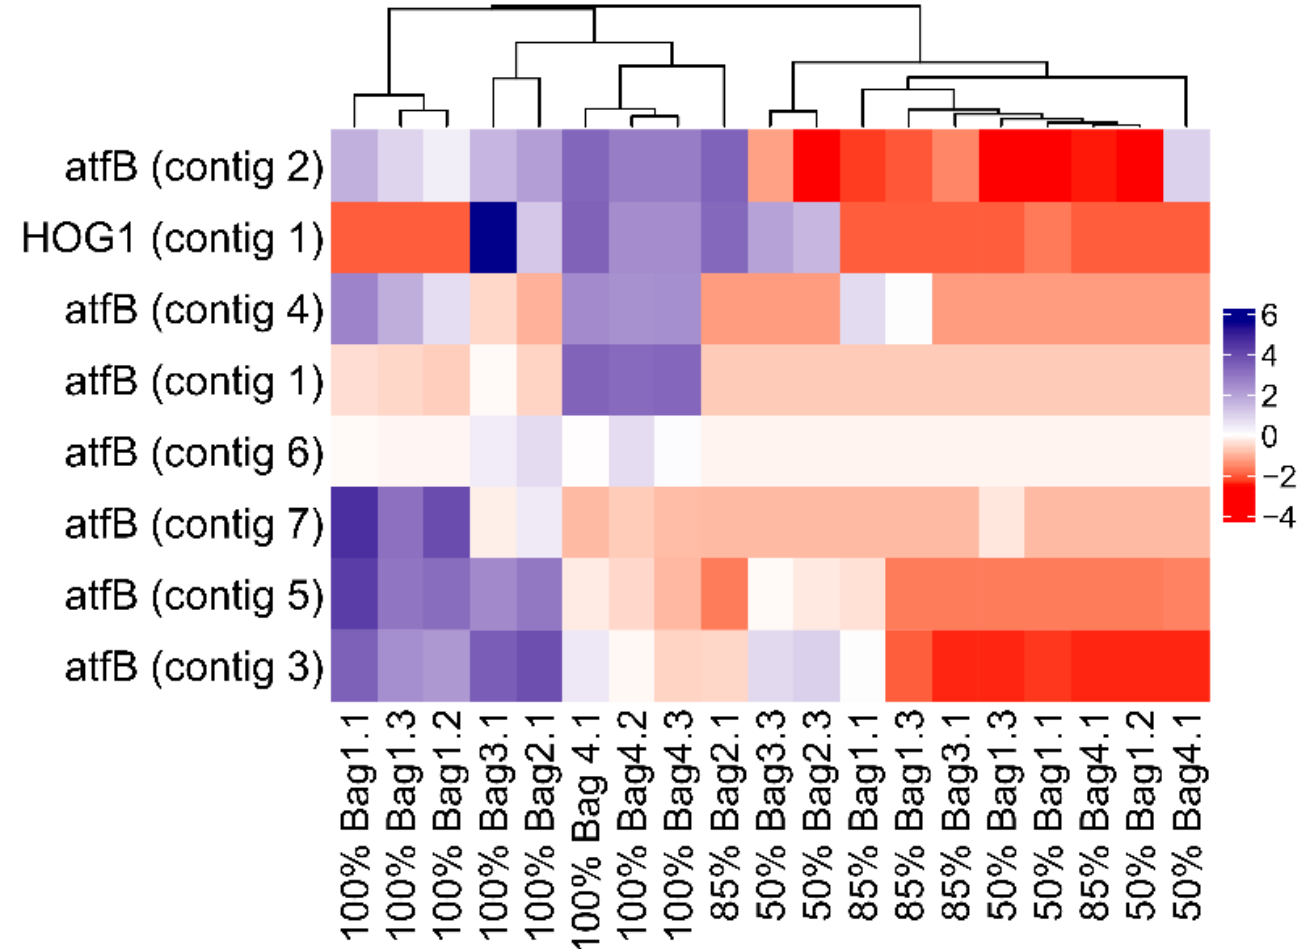

(c) Upregulated at 85% compared to 50%

(d) Upregulated at 50% compared to 85%

Moisture results in upregulation of genes associated with allergens and aflatoxin

Collaboration with Asthma Express Program

Phase I (2021- 2023) Needs Assessment – 21 families

- Completed

Phase II (Started 2024) Field Testing – 100 families

- Home visits, sample collection, sensor unit and app testing in the field, allergen detection validation, patient education
- Exploring addition of spirometry for family participants

Home Allergens and Asthma: Join Our Study

What's the purpose of the study?

Researchers at Nationwide Children's Hospital and The Ohio State University are studying allergens in the home and how they impact those with asthma.

Who can take part in this study?

Patients in the Asthma Express program between 5 and 13 years of age. Participants must be able to read and understand English. If your child has a disability but would like to participate, please contact us to learn more about accommodations and possible enrollment.

Participation is voluntary, and you can leave the study at any time. If you do not want to be in this study, your medical care will not be affected.

What will happen during the study?

Study participants will complete a survey and be interviewed by study staff. Participation will take about 90 minutes.

To participate, visit <https://ecdcap.nchh.org/surveys/> and enter the code 33JLALJFD, or scan the QR code.

For more information, contact Dr. Chris Timan at (614) 722-4526

Principal Investigator: Dr. Christopher Timan

The allergens families are focused on removing may not be the most associated with asthma

Allergens tried to remove

Actions taken

Differences in asthma control vs. perception

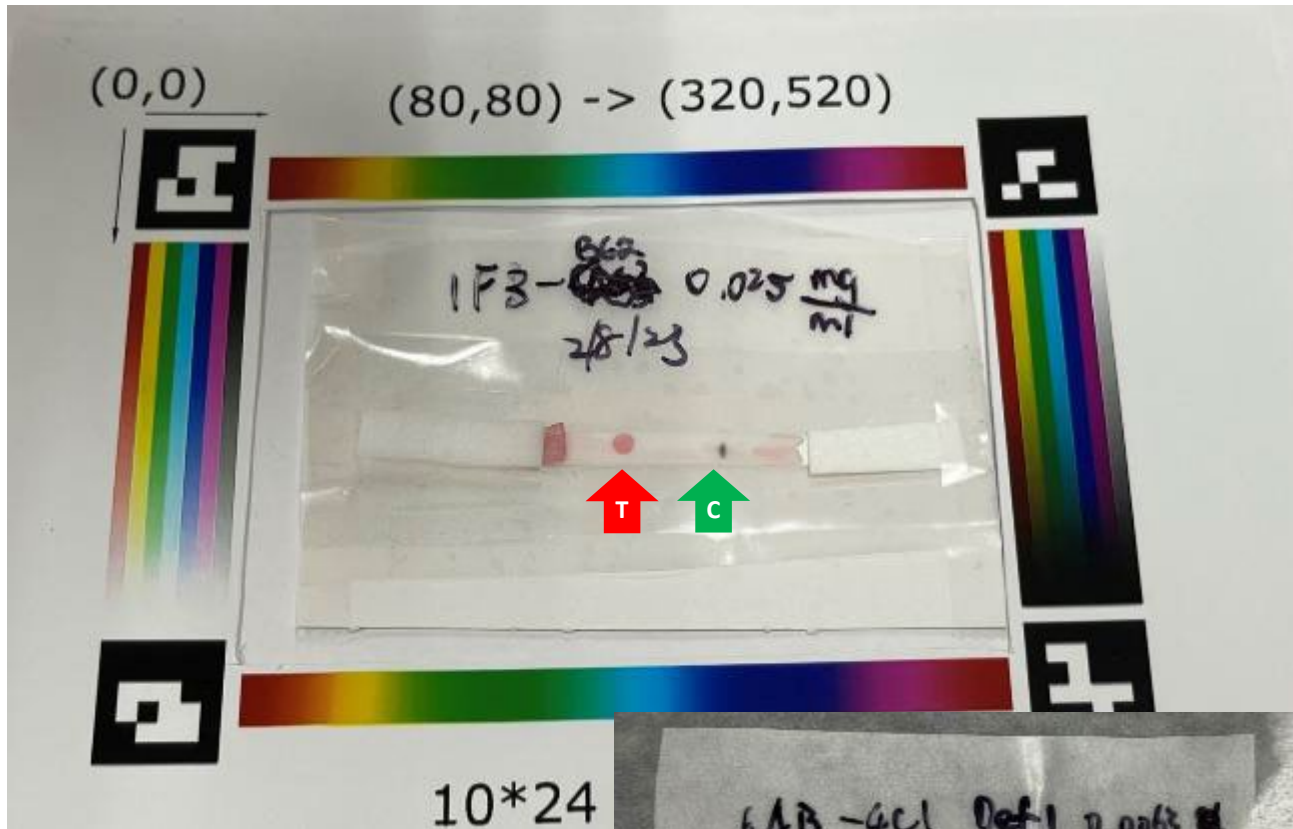

Participants interested in allergen detection

- 71% - “extremely important” to be able to detect allergens
- 52% - allergen education is “extremely important”
- 71% - allergen mitigation is “extremely important”

- Participants were especially interested in help resolving landlord/tenant issues

Novel Electrospun Sensor

Cockroach sensor

Left: **Cockroach sensor** complementary monoclonal antibody pair

Top: **Dust mite Der f 1** complementary monoclonal antibody pair – false positive result

System dependent on color detection like many other tests

Color detection and quantification enhanced

(A) Color reference board: A general-purpose board design can be integrated to test kits.

(B) AR-based image capture module: Guiding user device movement until optimal position reached.

(C) Color Correction Algorithm: Align captured images with the standard color reference board

Integration of warnings and shadow correction
